

- Recap:
- github environment
    - Dev
    - Test / Staging
    - Production

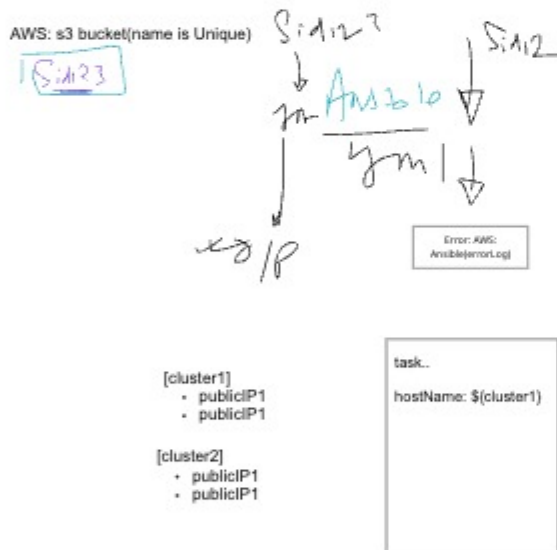

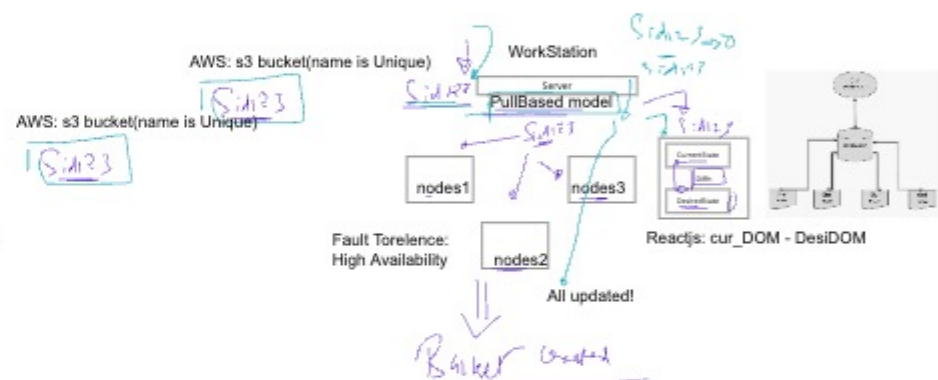

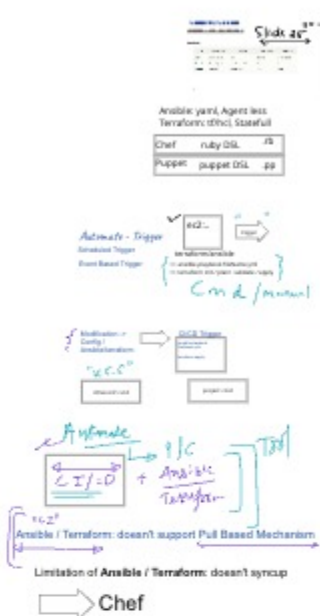

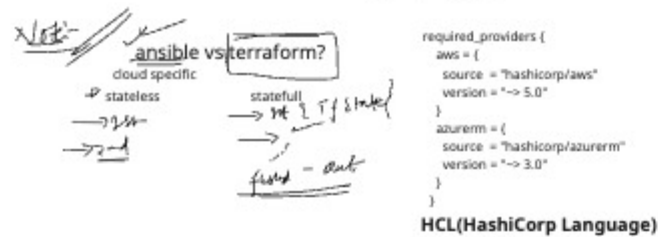

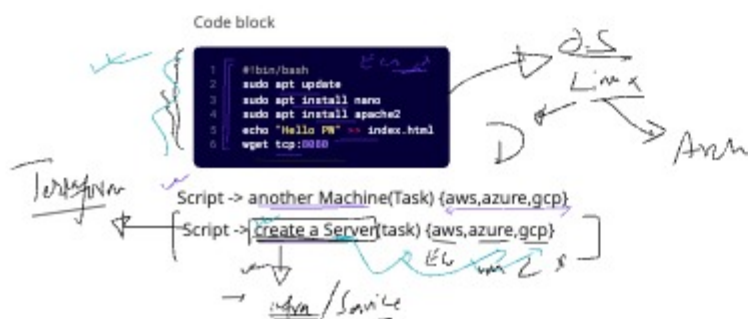

- 
- Notes
1. updating firewall
  2. Scaling of compute platform
  3. installing monitoring tools
  4. scaling storage
  5. updating patch of software

```
[webservers]
web1.example.com
web2.example.com
web3.example.com
```

## Install apache2 on webServers

Which of the following is NOT a key benefit of configuration management?

- Consistency
- Scalability
- Disaster recovery
- Manual intervention for every change

- Snowflakes
- Nodes
- Playbooks
- Agents

- To create new software
- To maintain systems in a desired state
- To replace outdated hardware

- To create new software
- To maintain systems in a desired state
- To replace outdated hardware
- To monitor network traffic
